A plugin to use the Austrian citizen card with the free password manager KeePass has been developed.

KeePass can protect passwords using a master password, a key file, or by binding it to the Windows account. This A-SIT plugin extends the functionality of KeePass. It adds support for the Austrian Citizen Card (e-card G2 and G3 cards, ACOS cards). With this plugin you can use your Citizen Card to protect your password database. This plugin generates a random key and encrypts it with the Citizen Card. Every time the database is unlocked the plugin will decrypt the key using your smartcard and PIN. Additionally you can use a password or bind the database to your Windows account to further increase the security.
