Open Office Signature

Archived. This content is no longer updated. It remains available for reference.

Source https://technology2.a-sit.at/en/publications/open-office-signature/

The plugin allowed qualified electronic signatures on PDF documents created from Open Office.

Electronic signatures are a basis of eBusiness and eGovernment, as data is authenticated and protected against later manipulation. They allow offering official documents electronically that before only were available on paper.

A-SIT has developed a plugin for OpenOffice that allowed to integrate PDF-AS (a national Austrian library to create official signatures).

As the tool was only available up to OpenOffice version 2.x, the project was retired an the plugin is no longer available.

The tool is no longer available for download.
