On the behalf of the Federal Chancellery the „Security Capsule“ was developed as a reference implementation of Citizen Card Interface. It corresponds to the version 1.2.0 of Security Layer specification and is used as a Citizen Card emulation and test tool for developers.

The „Security Cepsule New“ implements minimal requirements for Security Layer specification 1.1.0, as well as selected fundamental improvements of the version 1.2.0. Therefore, the implementation can support both 1.1.0 and 1.2.0 functionality modes of Security Layer specification.
